In internal news: This is the final edition of *MaxPlanckResearch* that will feature the contribution of our colleague Mechthild Zimmermann, who died far too soon early in December 2023. She was a member of the science editorial team from 2014 and covered a huge range of topics – from legal and socio-political to scientific-historical and art-historical contributions. We will miss her professional competence, her journalistic flair, her sense of style, and her enthusiasm for working in the editorial office. We also feel her loss deeply on a personal level.

Reprint of texts is only permitted with the prior approval of the publisher. None of the views and opinions expressed in *MaxPlanckResearch* may be interpreted as representing the official views of the Max Planck Society and its associated bodies.

The Max-Planck-Gesellschaft zur Förderung der Wissenschaften e.V. (Max Planck Society) comprises 84 institutes and research facilities with approx. 24,000 employees, including some 7000 employed scientists. In 2022, its basic funding by the Federal Government and the Federal States amounted to EUR 2.0 billion. Max Planck Institutes conduct basic research in the natural sciences and the humanities. The Max Planck Society is a nonprofit organization registered under private law as an incorporated association. Its central decision-making body is the Senate, which includes members from the world of politics, the scientific community, and the professional public.

MaxPlanckResearch is printed using FSC®-certified and other controlled materials.
