24 | *SELF-EXPRESSION*

People who express their feelings in public engender empathy among others.

46 | *STANDING UP*

The physicist Hanieh Fattahi is working to protect the climate.

66 | *SPLITTING UP*

Spectral analysis has been an important tool in astrophysics for a long time now.

74 | *THAWING OUT*

Global warming is causing permafrost soil to thaw.

08 | IN BRIEF

16 | VIEWPOINT

The legal legacy of the colonial era

Colonization has become a thing of the past. Yet its impact is still being felt in the form of coloniality – the way in which the world is perceived, understood and governed.

The oceans are losing their balance

FOCUS

Just let it all out!

24 | Emotions, spot on

According to traditional dogma, political decisions should be rational and sensible. Under no circumstances should they be emotional. However, the reality has always looked somewhat different. What importance did feelings have for political events?

32 | In the web of fear

Anxiety disorders are a huge burden for people who are affected. Using virtual reality, researchers aim to understand these disorders better and to develop standardized treatment. A self-test.

38 | A robot with a gentle touch

To be able to provide people with therapeutic support or support in everyday life in the future, machines will have to be capable of feeling and gently touching their human counterparts. Tests with sensitive robots are already being conducted.

52 | DOUBLE TAKE

KNOWLEDGE FROM

54 | Hearing colors, seeking genes

Synesthesia is one of the most fascinating phenomena in the neurosciences. Only very slowly are its scientific mysteries being unraveled.

60 | Booster from alpacas

The immune system of this lama-like animal contains antibodies that could be used in effective medication against SARS-CoV-2.

66 | Cosmic detective work

The chemistry of a star contains valuable information. Accurate determinations of abundances of chemical elements based on spectral fingerprints require highly sophisticated methods.

74 | Thawing permafrost

Over a trillion tons of carbon are sequestered in permanently frozen soils (permafrost), especially in the Arctic Circle. Are they releasing huge quantities of greenhouse gases into the atmosphere?
